

ReBOSSIS Displayed at APMA2015

Our flagship, ReBOSSIS, was displayed at a conference called APMA2015 in Orlando, Florida, USA from July 23 to July 26, 2015. This conference is annually organized by APMA, the society of medical doctors specializing in ankles and the toe-tip. Various symposiums, simulative operations, and exhibitions were actively performed in the conference. Our local sales agent, Siena Spine, set up its own business booth there, introducing ReBOSSIS as an innovative artificial bone used for treating external wounds, making demonstrations of mixing ReBOSSIS with quasi-blood and showing how to use ReBOSSIS in operations.
